BMR (With Lean Mass)	984
TDEE	1525.2
Target Calories	1350
Goal	FAT LOSS
Country	Australia
Diet Plan	LCD - NV

Dear Kavitha,

I hope you are super excited to follow your Diet Journey with our team!

Based on your preference we have created a Veg & Non veg Low Carbohydrate Diet. In this diet, you will be consuming 102g of carbohydrates, 94g of Protein, and 55.7g of Fat.

Use the **Live Fit Life** Application to track your macros and calories intake. Calculating the ingredients will help you to stick to the diet plan.

The first 10 days of your diet period will be considered as an observation period. It is very common to face some challenges to follow the diet in the initial period, such as mild headache, low in energy, puking, all because of the change in your body. However if you feel any abnormal symptoms like diarrhoea, allergic, fainting, Kindly inform us immediately to analyse your body.

What is a Low Carbohydrate Diet (LCD)?

A low carbohydrate diet is a dietary approach that restricts carbohydrate intake to 40% of total calorie intake, while increasing the proportion of protein and fat in the diet. The diet aims to promote weight loss and improve blood sugar control by reducing carbohydrate intake and emphasizing the consumption of whole, nutrient-dense foods.

High-carbohydrate foods such as bread, pasta, and rice are limited, while foods such as vegetables, fruits, lean proteins, and healthy fats are encouraged. Research suggests that this approach may be effective for weight loss and improving certain health markers.

How long should I stick to this diet?

If weight loss has stalled for 4-5 weeks while following a diet, it may be time to consider making some adjustments to the diet. One option could be to reduce calorie intake by 200-300 kcal per day, while still maintaining a low carbohydrate intake. This could help create a calorie deficit and promote weight loss.

Roadmap of the progression:

This Data Should be filled by you on a regular basis to track your progression. Kindly find the details as accurate as possible. In our next consultation, we will be reviewing this document and accordingly will proceed further for the next Diet plan.

* STC – Subject to Change

Prediction Chart	Week1	Week2	Week3	Week4	Week5	Week6	Week7
	(Mar 8th to 14th)	(15th to 21st)	(22nd to 28th)	(29th to Apr 4th)	(5th to 11th)		
Recommended Workout – (5 Days / week)							
Calories	1350	1350	1350	1350	1350	STC	STC
Target Weight Loss	0.5 to 1 kg	0.5 to 1 kg	0.3 to 0.8 kg	0.3 to 0.5 kg	0.2 to 0.5 kg		
	68.6 kg	68.1 kg	67.8 kg	67.5 kg	67.3 kg	**Subject to change	

Weight Management: Please share your weight update, The information can be transferred via the trainer during the session, which helps us to keep a track.

Send the weight data in the below format,

Start date - Weight in kg - ()

After Detox - Weight in kg - ()

Next check date - Weight in kg - ()

For Eg:

28/06 - 86.3 kg

30/06 - 85.3 Kg

05/07 - 84.4 Kg

07/07 - 84.0 Kg

11/07 - 83.7 Kg

14/07 - 82.8 Kg

Kindly go through the diet and In case of any queries related to diet, you can message us on our support group or drop a mail to nutrition@livefitlife.in.

Medical Guidelines

Hypothyroidism:

Hypothyroidism is a condition in which the thyroid gland doesn't produce enough thyroid hormones. While there isn't a specific diet for hypothyroidism, some foods may interfere with thyroid function and medication absorption, and thus it is recommended to avoid or limit them. Here are some foods that people with hypothyroidism may want to avoid or limit:

1. **Soy products:** Soy contains compounds called isoflavones, which can interfere with thyroid hormone production and absorption.
2. **Cruciferous vegetables:** Vegetables such as broccoli, cauliflower, cabbage, and kale contain goitrogens, which can interfere with thyroid function by blocking the uptake of iodine.
3. **Gluten-containing grains:** Some people with hypothyroidism may have an autoimmune condition called Hashimoto's thyroiditis, which is associated with gluten sensitivity. Avoiding gluten-containing grains like wheat, barley, and rye may help improve symptoms.
4. **Fatty and processed foods:** Fatty foods can interfere with thyroid hormone production and absorption, and processed foods often contain added sugars and unhealthy fats that can contribute to weight gain, which is a common problem for people with hypothyroidism.
5. **Sugary foods:** High sugar intake can lead to insulin resistance, which can interfere with thyroid hormone production and exacerbate hypothyroid symptoms.

It is important to note that these foods do not need to be completely avoided, and some people may be able to consume them in moderation without any negative effects.

Diet Summary:

Meal	Time	Options	Foods	Recipes Notes
After Wakeup		Glass of warm / normal water		Helps to remove toxins from your body
Early morning	06:00	1	Black Coffee	#Refreshment beverage - Take this without sugar

Omega 3 Supplement; (1000 to 1500 mg) - (Before Bed Time)				
CARBOHYDRATE:34g, PROTEIN: 14.6g, FAT: 11g, CALORIES: 321kcal				

Ingredients	Alternatives	Quantity
Chicken breast (200g)	Mutton (Lean) + Reduce oil	180g + 1 tsp
	Any fish	190g
	Crab	200g
	Prawn (Large Tiger)	170g
	Full eggs + white	3 + 1
	Whey protein	2 Scoop
	Lean Beef	260g
	Paneer + Reduce oil	150g + 1 tsp

Do's & Don'ts:

- Aim to drink 3 – 4 liters of water in a day. Keep yourself hydrating.
- Make sure you weigh all your foods with a kitchen weighing scale.
- Macros calculations are important to be followed to achieve your goal.
- Your Mealtime is not super mandatory, following a regular time can help you avoid a starvation state. Intake all the mentioned macros quantity within that day.
- Do not sauté or deep fry the food, avoid processed, artificial foods. (canned, ketchup, sauces)
- **Note: For a diet, reduce your salt intake than the usual (Preferably less than 2-3g or 1 tsp/day).**
- Take any mentioned meal or snacks for every 3 hours. Feeding healthy nutrition for every 2.5 – 3 hours will keep your body in an anabolic state throughout the day.
- Keep us updated with your weight progress twice in a week to monitor your progression. We will have to change the diet if required.

Low Calories Foods	
< 100 Kcal / 100g	
Vegetables	Fruits
Cauliflower	Berries
